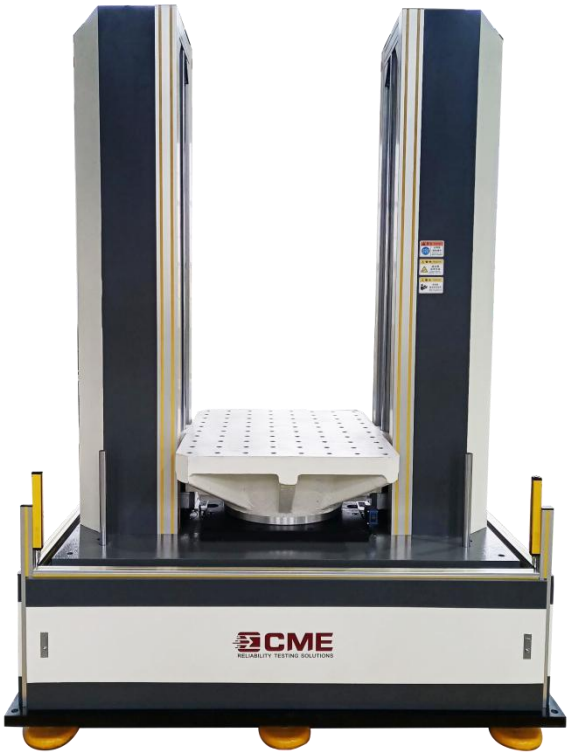
KRD11 Series Pneumatic Vertical Shock Test System



CME Technology Co., Ltd.

Email: info@creditcme.com

KRD11 series pneumatic vertical shock test system is featured with advanced design, high degree of automation and reliability, simple operation and convenient maintenance. The system meets the requirements of both shock and bump test, can perform conventional half-sine wave, post-peak sawtooth wave, square wave and other waveform shock tests.

- Pneumatic drive, simple structure and high reliability, without hydraulic leak risk.
- Maximum shock rate up to 120 times / min.
- Impact testing for small pulse lower to 0.3ms
- Shock testing machine with high acceleration is up to 3000g
- It can easily realize large shock pulse width and small overload test.
- With a fast shock rate comparing to motor or hydraulic driven bump table, it has higher reliability and better bump waveform.
- The speed and rate of shock can be easily controlled by adjusting the gas pressure.
- IPS-2000 shock control and measurement system can perform manual shock, continuous shock (bump test), single shock, and interval shock.
- Built-in brake mechanism ensures the safety of operation in any situation.
